

BRAINS WITH BRAWN

Two-in-One with the Powerful *Geo Brick Drive*

Most smart drives provide motion control capability as an afterthought - and that's not smart at all. Crude motion control can send your applications running into performance barriers. With the powerful *Geo Brick*, Delta Tau presents a full-fledged motion control package and we built the brains to back it. If you want a top-flight motion controller like the Turbo PMAC in your smart drive, this fully scalable solution - with control, power, and I/O - is for you.

For over 25 years, Delta Tau has defined, refined, and redefined advanced motion control systems. Using our collective knowledge of motion control, we are the only company to offer 4-, 6-, and 8-axis servo drive packages.
