

# “When you Just Have to Control Everything”

## ADVANTAGE900

We put the control back in your hands. The Advantage 900 is a dual processor control that leverages the power and flexibility of a PC-based user interface while trusting the high-speed, bullet proof performance capabilities of a true real time DSP to keep your servo on track.

The open architecture software easily adapts to your machine configuration. High-speed machining, 5-axis contouring with 3D tool compensation and robotic kinematic capabilities are just a few features built in at no extra charge. The Advantage 900 is the first control of its kind to allow connection between control electronics and user interface via USB2.0, Ethernet or Fiber Optic MACRO. Imagine the flexibility of all these features at a price that will make you forget the competition.

What are you waiting for...
